SOS

Le code de transfert radiatif SOS (Successive Orders of Scattering) simule la luminance diffuse et polarisée du système {surface – atmosphère } par ciel clair [DR1,DR2]

## Structure du code SOS\_ABS

## Absorption gazeuse

### Absorption par les raies :

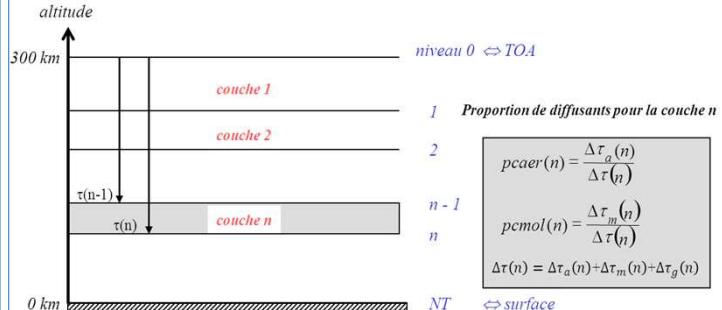

- Modélisation suivant la méthode de la k-distribution [DR3]
  - Gaz absorbants :  $\text{H}_2\text{O}$ ,  $\text{O}_3$ ,  $\text{CO}_2$ ,  $\text{O}_2$ ,  $\text{CO}$ ,  $\text{CH}_4$ ,  $\text{N}_2\text{O}$

### Absorption par les continuum :

- Gaz absorbants :  $\text{H}_2\text{O}$ ,  $\text{CO}_2$ ,  $\text{O}_3$ ,  $\text{N}_2$ ,  $\text{O}_2$ ,  $\text{NO}_2$ ,  $\text{SO}_2$

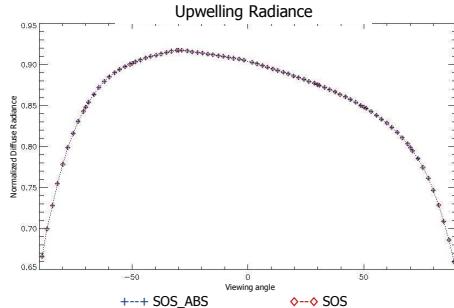

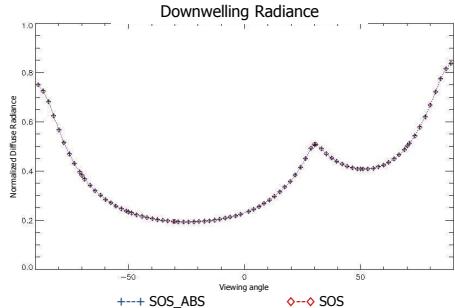

Domaine de validité : 0,2 µm à 4,0 µm

## Profil atmosphérique

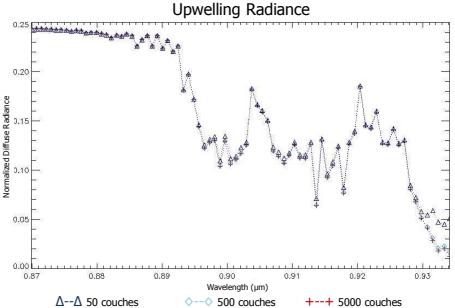

Le nombre de couches atmosphériques est adapté en fonction de l'épaisseur optique totale pour chaque itération de l'implémentation CKD

## SOS\_ABS / SOS

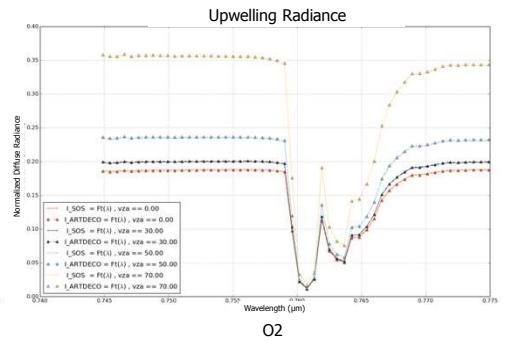

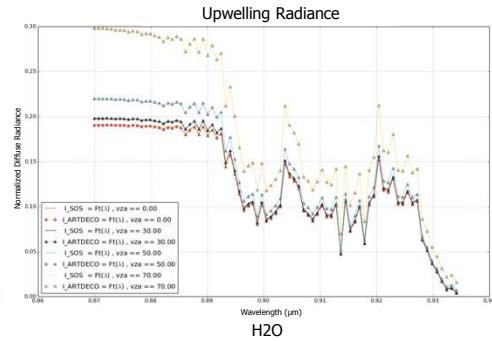

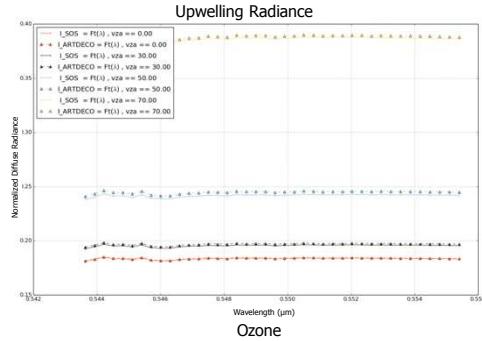

$\lambda=0,443 \text{ } \mu\text{m}$ ,  $\theta_s = 30^\circ$ , plan principal, MOT = 0,23, AOT = 0,1, aérosols continentaux,  $\rho=1$

## SOS\_ABS

Profil tropical, AOT 550= 1,0, particules fines,  $\rho=0,3$ , Psurf = 1013 mb,  $\theta_v = 50^\circ$ ,  $\Delta\phi=0^\circ$

SOS\_ABS / ARTDECO

Profil tropical, AOT 550= 0,5, particules fines,  $\rho=0,3$ , Psurf = 1013 mb°,  $\Delta\phi=0^\circ$
